## LAFAYETTE LA-22 12 WATT AMPLIFIER WITH CASE

The Lafayette LA-22 amplifier is a complete 12 watt power amplifier with built-in pre-amplifier-equalizer that brings you real high fidelity at low cost. Its wide range frequency response and low hum distortion insure sparkling reproduction that will delight you. This undistorted power is achieved from circuitry employing the new premium quality EL84 tubes in a pentode connected balanced output circuit. Five inputs are provided for every type of crystal, ceramic or magnetic phono cartridge, for tuner and tape head as well as high level auxiliary input for such devices as TV audio, additional crystal phono, etc. A rear chassis switch changes from tape head to magnetic input. The front panel function selector and equalization switch gives instant choice of tuner aux, or phono with proper equalization for all types of records and tape head. Equalization positions are RIAA (LP), 78 for old type records, and NARTB equalized tape head. This last position also provides equalization for London (HrrLP) and other European recordings.

The loudness control is a compensated volume control that approximates Fletcher-Munson characteristics to give you tonal balance at low listening levels. This control also operates the AC on and off switch. The bass and treble controls afford a wide variation of cut or boost for emphasis or deemphasis of highs and lows. Other features include an auxiliary AC receptacle on back to plug in a tuner or phono so it can be turned on or off with the amplifier switch. Provision is made for mounting in cabinet or on panel. It is attractively finished in fine grain hammerstone copper shade that blends harmoniously with both modern and traditional decor. Its appearance matches the Lafayette LT-25 tuner. It comes complete with removeable case.

The Lafayette LT-40 FM tuner was designed for the large group of discriminating music lovers who confine their broadcast listening to FM (on which the only true high-fidelity broadcasting is done). By concentrating on pure FM, Lafayette engineers have produced a tuner that gives the utmost value possible in performance and quality. The circuit is the Armstrong circuit with Foster-Seeley discriminator and dual limiters. It provides extreme sensitivity which even pulls in "hard to get" stations. Temperature-compensated circuitry combined with automatic frequency control insures both drift-free operation and automatic "locking in" of stations. Function selector knob has positions for OFF, FM and FM/AFC so the AFC action can be defeated while tuning in weak stations. The exceedingly low hum level and wide-range flat frequency response gives you the full benefit of the finest in FM reception.

### THE LAFAYETTE STEREO-TUNER IS UNIQUE AND INCOMPARABLE THE STEREO-TUNER IS YEARS AHEAD

More than a year of research, planning and engineering went into the making of the Lafayette Stereo-Tuner. It was designed not only to be a fine quality high-fidelity tuner, not only to include every practical and worthwhile feature, but also to protect your investment for the coming years. Binaural broadcasting (simultaneous transmission on both FM and AM) has already started, and will naturally become more and more the method of high-fidelity broadcasting. The unique design of the Lafayette Stereo-Tuner protects you against obsolescence.

The FM and AM sections may be operated either independently of each other or together. For binaural (stereophonic) broadcasts, separate output jacks are provided so that the 2 channels may each be simultaneously fed to individual amplifier-speaker systems to enjoy the ultimate in high-fidelity stereophonic sound.

The FM and AM sections have separate volume controls so that, when used for binaural programs, a proper balance can be set for each channel. Without this all important feature, the wonderful realism of stereophonic sound would be destroyed. Convenient front panel switch changes from binaural to monaural use. Simplified accurate knife-edge tuning is provided by magic eye which operates independently on FM and AM. Automatic frequency control locks in FM signal permanently.

Apart from its unique flexibility, this is, before all else, a quality high-fidelity tuner incorporating features found exclusively in the highest priced tuners. As shown by the number and types of tubes, no "short-cuts" have been used. With the Lafayette Stereo-Tuner you are assured of noise-free, drift-free, distortion-free reception. You will not only hear this quality, you will sense it even in the mechanical details; in the "feel" of the velvet-smooth easy flywheel tuning, in the professional appearance of the tastefully selected controls. The just-right shade of gold-brass escutcheon contrasts just enough with the dark maroon background, and is set off by matching maroon knobs with gold inserts. Carefully designed for ease of installation in cabinets if desired. Size is 13 1/2" H x 10 1/2" D x 4 1/2" H. Shipping weight 18 lbs. Supplied complete with cover. Made in U. S. A.

(AVAILABLE COMPLETELY WIRED AS MODEL LA-70)**

**FEATURES:** A very conservatively rated amplifier designed for continuous heavy duty and specifically intended as a perfect companion-piece for any of the newest high-fidelity speakers and components. The matched-pair push-pull KT-88's, normally top-rated at 100 watts, are used for only 70 watts maximum output. Similarly, only highest quality, conservatively-rated components are used throughout.

To achieve maximum stability without regard to the kind of speaker load used, phase-correction networks have been kept to a minimum and the power supply uses pure resistance-capacitance filtering to avoid the potentially resonant and unstable performance of choke-filtered circuits.

The calibrated variable-damping factor control provides optimum performance from any of the amplifier output taps with any speaker system, without affecting volume level or frequency response. The control can be switched out of the circuit, if desired.

The Balance-Adjust Control and Meter enable you to match output tubes when they are replaced. The Bias adjustment, also read on the built-in meter, is a further provision for correct operation of the output tubes when replaced and is your assurance of continuous top quality performance.

**SPECIFICATIONS:** **POWER OUTPUT:** 70 watts continuous sine wave, 80 watts program material, 160 watts instantaneous peak. **HUM AND NOISE:** 90 db below rated output. **HARMONIC DISTORTION:** Less than 1%, 20-20,000 cps at 60 watts, ± 1 db; less than 2% at 70 watts. **IM DISTORTION:** Below 1 1/2% at 70 watts (60 and 7000 cps); less than 1% at 60 watts and below 0.3% at 30 watts. **FREQUENCY RESPONSE:** 10-100,000 cps ± 1 db at 1 watt, with gradual controlled roll-off above 100,000 cps; 20-20,000 cps ± 1 db at 70 watts. **STABILITY:** No peaking or marginal instability with reactive loads. **DAMPING FACTOR:** Variable 0.5 to 12. **INPUT SENSITIVITY:** 2.0 volts for 70 watts output. **CONTROLS:** Calibrated variable damping factor control, bias adjust, balance adjust, and meter switch. **METER:** Clear plastic-front rectangular meter. **TUBES:** 2-KT88, 6AN8, GZ34 (Rectifier) plus selenium rectifier. **REAR PANEL:** Incorporates octal socket (unwired) for use in supplying power for preamplifier, 2 auxiliary 117 volts AC outlets, 2 speaker terminal strips; input jack, and fuse. **OUTPUT TAPS:** 4, 8, and 16 ohms. **SIZE:** 14 1/2" w x 10" d x 7 3/4" h. **SHIPPING WEIGHT:** 40 lbs.

## PROFESSIONAL TURNTABLE WITH HYSTERESIS-SYNCHRONOUS MOTOR

The LAFAYETTE TRUE HYSTERESIS-SYNCHRONOUS MOTOR. Since many so-called "hysteresis" motors have appeared and will continue to appear on the market, it is important that you know the difference between the real thing as provided by Lafayette, and the imitators with partial hysteresis motors!

ONLY HYSTERESIS-SYNCHRONOUS MOTORS—SUCH AS LAFAYETTE'S—are free from speed variations due to fluctuations in line voltage, load and temperature!

ONLY HYSTERESIS-SYNCHRONOUS MOTORS—SUCH AS LAFAYETTE'S—are the smoothest type known, completely free from "cogging" (the minute variations of speed which show up as waw and flutter)!

ONLY LAFAYETTE'S HYSTERESIS-SYNCHRONOUS MOTOR, in its price class, is made to extremely fine tolerances (on the order of .0001 inches)!

Only Lafayette's motor has 16 cores, a high permeability rotor magnet, ball thrust bearings, oilite sleeve bearings plus felt oil reservoir, cooling fins as an integral part of the rotor and a hollow rotor core for maximum efficiency and minimum heat. Only Lafayette's motor can be oiled from above, without disassembling, through a unique oil feed system. Only Lafayette's motor has a self-aligning armature.

ONLY LAFAYETTE CAN GIVE YOU A REALLY PROFESSIONAL TURNTABLE WITH TRUE HYSTERESIS-SYNCHRONOUS MOTOR AT SUCH AMAZINGLY LOW PRICES!

### PK-90 VISCOUS-DAMPED TONE ARM

This transcription arm assures dependable and stable operation, utilizing the "floating action" principle of "viscous damping." The arm is supported at a single point by a pivot and jewel bearing having negligible friction. It is completely isolated from the turntable by a viscous fluid occupying the gap between a ball and socket. This damping control permits high compliance and negligible tracking error, and prevents damage to either record or stylus should the tone arm be accidentally dropped. Low frequency resonance, kidding and groove-jumping are likewise minimized. The tone arm accepts all records up to 16" and accommodates virtually all hi-fi cartridges by means of precisely engineered adapters which simplify installation and provide proper stylus pressure. This tone arm is a quality companion to the PK-400 with matching finish. Shpg. wt. 2 1/2 lbs. Net 11.95

They're new, they're different, and they're better! The case is of durable gleaming porcelain, a ceramic known for its high degree of imperviousness to moisture and resistance to heat. The capacitor is of finest quality, tested at 3 times the rated voltage with much closer capacity tolerance. It maintains its characteristics under extreme conditions of heat and humidity. Its mechanical construction is excellent, the leads are firmly attached and sealed — they won't twist or break off. We've selected the most popular values and put them up in two serviceman designed kits. Each condenser is plainly marked. Each value is mounted on separate handy strips. All are conservatively rated at 600 DC working volts. See chart for contents of each kit.

- ACCURATE LINEAR SWEEP SYSTEM
- SWEEP WIDTH 0-12MC, CONTINUOUSLY VARIABLE
- RF OUTPUT 100,000 μV WITH BOTH STEP ATTENUATOR AND CONTINUOUS ADJUSTMENT

The LSW-40 is a factory wired precision built TV-FM sweep generator that furnishes swept signals for visual alignment over the range of 2MC-260MC in 2 bands of 2MC-120MC and 140MC-260MC. The sweep width is continuously variable from 0-12MC over the entire range. The RF output of 100,000 microvolts is controlled by an accurate 3 step (X, X10, X100) attenuator and a continuously variable fine adjustment control. Output impedance is 75 ohms unbalanced. 3 volt RMS, 60 cycle sine wave horizontal sweep voltage for oscilloscope is available from front panel. Controls, all on front panel, are frequency range selector, adjustable horizontal phasing control with AC on-off switch, continuously variable blanking control with off position, sweep width, RF output step attenuator, and RF output fine adjust control. Also on front panel are pilot light, RF output connection, 60 cycle output, and vernier drive dial knob. Additional features include completely shielded, accurate, linear electro-magnetic sweep system, filtered power-line for minimum leakage, and 3/2" easily read dial. Tubes are 6J6, 12BH7, 6AV6 and 6X4. Sturdy grey wrinkle metal cabinet has carrying handle. Complete with tubes and 75 ohm and 300 ohm coaxial cables. Size 8" x 12" x 5". - SUPPLIED WITH 4.5MC CRYSTAL—0.002% ACCURATE
- RF OUTPUT 100,000 μV WITH CONTINUOUSLY VARIABLE ATTENUATOR
- SELF CONTAINED AUDIO MODULATION

The LSG-30 TV-FM Marker Generator is a factory wired, precision instrument that is both a marker and bar generator. It provides marker signals over the entire range of 3.5MC-250MC in 6 bands. The combination curve thus speeding up alignment. Marker indications simultaneously on the response supplied mounts in front panel socket and is accurate to 0.002%. The output of the crystal may be used to calibrate the marker or other instruments. In addition it provides both vertical and horizontal bars for fast visual adjustment of linearity of TV pictures. The bar generator frequencies are easily adjustable by front panel variable controls. The horizontal bar modulation frequency is in the audio range (approx. 720 cps.) and is variable, thus alignment eliminating the use of an additional instrument. The RF output of 100,000 μv is controlled by a continuously variable attenuator. Output impedance is 75 ohms unbalanced. Controls all on front panel, are frequency range selector, 4 position signal selector switch (CW, Vert. bar, Horiz. bar, xtal), RF output attenuator, horizontal bar control, vertical bar control and vernier driven dial pointer. Other features include filter to prevent leakage to line through power supply, easily readable 3/2" dial scale protected by clear plastic cover and vernier driven dial pointer, sturdy grey wrinkle metal cabinet Size 8" x 12" x 5". **A LAFAYETTE SPECIAL TUBE TESTER**

- MOST ADVANCED ENGINEERING TO FIT SERVICEMAN'S NEEDS

**26.95**

A new streamlined tube tester with a realistic approach to the problem of quickly testing the ever increasing number of tube types. It incorporates new and advanced engineering features and all at a price of about half of even the most ordinary tube tester. Read these Specifications:

**"FREE POINT" ELEMENT SELECTOR SWITCHING:** Newly designed, it reduces possibility of obsolescence to a minimum because any pin may be used as a filament pin and voltage applied between it and any other pin, or even the "top cap". Tubes with tapped filaments or with filaments terminating in more than 1 pin are truly tested.

**MULTIPURPOSE TUBES:** Special isolating circuit allow each section of multi-purpose tubes to be tested individually as if it were in a separate envelope.

**SHORTS AND LEAKAGES:** Supersensitive method checks shorts and leakages up to 5 megohm between any and ALL elements; continuity between various sections individually indicated.

**SIMPLICITY:** Fast simple operation. The 4 position fast action snap switches are all numbered in exact accord with RTMA standards. Thus when testing element terminating in pin No. 7 of a tube—you use button No. 7. You can't insert a tube in the wrong socket—there's one for each type of tube base.

**TUBE TYPES:** Tests all octal, loctal, 7 pin miniatures, 9 pin miniatures as well as the new naval and Sub-Minar types. Old type sockets used for testing obsolete types—that you rarely see anymore—have been eliminated.

**SIZE:** A practical size to carry with you as well as for use in shop—only 8 1/2" x 6 1/2" x 2 1/4" deep. Shpg. wt., 5 lbs.

## NEW! WORLD'S SMALLEST PM SPEAKER 1-3/16" DIAMETER—ONLY 9/16" THICK!

- IDEAL FOR EXTREMELY THIN TRANSISTOR RADIOS
- HIGHLY EFFICIENT AS SPEAKER-MICROPHONE FOR TELEPHONE-TYPE INTERCOM HANDSETS & HEARING AIDS!
- COMPLETE WITH MINIATURE TRANSFORMER

**1.95**

One of the most flexible speakers model Combines high sensitivity as a microphone with relatively high power-handling capacity as a speaker to make it perfect for "wrist-radio" use, for transistor radios down to about 3/8" thickness, for miniature transistor intercoms and telephone-type handsets, extremely small hearing aids and numerous other miniature applications.

This amazing speaker delivers approximately 0.5 milliwatts average output as a dynamic microphone and may be used by itself connected directly to a high impedance amplifier microphone input. Or—it may be used with the transformer supplied as a matching transformer for running a long low-impedance (14 ohms)-line with a voltage step-up of approximately 20:1.

The speaker is capable of handling up to 300 milliwatts of audio power. Frequency response is 550 to 5000 cps ± 10 db. Resonant frequency is 600-700 cps. Voice coil impedance is 14 ohms. The miniature transistor output transformer supplied has a primary impedance of 8000 ohms, single-ended. Transformer size is 1" x 1 1/16" d x 3/8" h, with 1-5/16" mtg. centers. Shp. wt., 1/2 lb.

## IMPORTED BINOCULARS WITH COATED ACHROMATIC LENSES AND PRISMS

Lafayette has gone "all-out" to present these fine, imported Zeiss type binoculars at heretofore unheard of prices! Each of these extremely precise optical instruments have coated lenses—clamped in (not just glued!) prisms—light weight alloy all metal bodies—weather proof, tear proof outer coverings—maximum light transmission—minimum distortion. Made by leading optical manufacturers to our own rigid specifications. Whether you are a yachtsman—hunter—hiker—sports fan—or a bird watcher—you'll find the binoculars you need in Lafayette's great selection. And Lafayette's famous money-back guarantee applies as always.

**FOCUS**—mechanism is either central focus (C.F.) by means of a single wheel and one adjustable eye piece, or individual focus (I.F.) wherein both eye pieces are separately adjustable.

**POWER**—is the number of times an image is magnified through your binoculars. For example 7X (7 power) means the object will appear 7 times larger (or closer) than with the naked eye. The second number used (i.e. the "50" in 12X, 50) is the diameter in millimeters of the objective lens.

**COATED LENSES**—tend to reduce reflection and pass up to 50% more light than uncoated lenses.
